

Sustainable Innovation: Performance Enhanced Hemp and Linen Fibres for the Global Nonwoven Industry

Innovation Highlights:

- BFT's fibres are patented, performance enhanced, 100% natural fibres designed to meet the exacting standards of the nonwoven industry
- BFT's fibres are plastic free, tree free, and compostable
- BFT's fibres are a plug-and-play replacement for plastic fibres. BFT's fibres run seamlessly on the major nonwoven platforms and do not compromise production speeds, efficiency, or uniformity
- BFT's fibres are not pulped or regenerated and therefore retain their natural moisture management characteristics. The resulting nonwoven fabrics have superior absorbency, wet strength, and a cloth-like feel
- BFT's fibres are suitable for a range of applications, such as next-to-skin applications like facial wipes to more industrial wipes used in disposable mops or surface cleaning
